

# Land Surveying Engineering

| Duration                |  |  |
|-------------------------|--|--|
| Ten semesters           |  |  |
| Degree                  |  |  |
| Land Surveying Engineer |  |  |

#### **Occupational Field**

The work of land surveyors is carried out independently or in a dependent relationship, either in public organizations or private companies.

Independently, this professional can perform surveys, land subdivisions, and urbanization projects; appraisals and expert assessments for real estate and judicial purposes; rural surveys to improve irrigation systems in agriculture, etc. In a dependent relationship within various provincial and national government departments, they can perform tasks in areas such as Geodesy and Cadastre Management, Municipalities, Roadways, or Hydraulics.

In the private sector, they can work for companies involved in road construction, power lines, gas pipelines, or dams, among others, conducting special measurements to obtain the necessary layout of works and calculating the volumes of projects.

#### **Professional Profile**

The Land Surveyor must possess the necessary knowledge to capture, process, analyze and represent spatial information from a perspective that allows them to: -The design and the execution of real estate registration systems, the determination, the delimitation and the valuation of territorial space, the participation in territorial planning, the surveying of surface and subsurface, the construction of geometric structures implicit in all types of engineering projects and the generation of cartography and georeferenced information systems.

Therefore, education should be based on theoretical and methodological foundations that provide legal, socio-economic, and technological support to their professional activity. They must interpret economic variables, define real estate evaluation methodologies, and apply specific surveying legal knowledge. They should apply formulas and perform

necessary calculations for the use related to the capture and processing of spatial information, utilizing specialized computer science in the fields mentioned. Much of the surveying field is characterized by rapid and constant evolution, requiring the professional to have an attitude of continuous updating and an inherent willingness to participate in multidisciplinary teams. They must be capable of responding to environmental requirements from the perspective of advising, planning, directing, executing, and overseeing specialized work and conducting research tasks related to their profession.

## Requirements

In addition to completing and passing the courses, the student must:

- Demonstrate proficiency in two levels of English language.
- Complete and pass the Curricular Course "Computer-Assisted Drawing".
- Undertake a Supervised Professional Practice.
- Complete and pass a bachelor's thesis (Final Project).

| YEAR | SEM. | SUBJECT                           |
|------|------|-----------------------------------|
| 1°   | 1º   | Mathematical Analysis I           |
| 1º   | 1º   | Numerical Calculus                |
| 1°   | 1º   | Computing                         |
| 1°   | 2°   | Analytic Geometry                 |
| 1°   | 2°   | Topography I                      |
| 1º   | 2°   | Drawing and Representation System |
| 2°   | 3°   | Mathematical Analysis II          |
| 2°   | 3°   | Topography II                     |
| 2°   | 3°   | Economy                           |
| 2°   | 4°   | Physics I                         |
| 2°   | 4°   | Applied Maths                     |
| 2°   | 4°   | Geology and Physiography Elements |
| 3°   | 5°   | Physics II                        |
| 3°   | 5°   | Applied Topography                |
| 3°   | 5°   | Building and Agrology Elements    |
| 3°   | 6°   | Applied Topography                |

## Study Plan

| 3° | 6°  | Topographic Networks                   |  |
|----|-----|--|--|
| 3° | 6°  | Legal Land Surveying I                 |  |
| 4° | 7°  | Geophysics Elements                    |  |
| 4° | 7°  | Plot Survey Acts                       |  |
| 4° | 7°  | Valuations                             |  |
| 4° | 8°  | Geodesy I                              |  |
| 4° | 8°  | Subdivisions and Urbanizations         |  |
| 4° | 8°  | Remote Sensing and Photointerpretation |  |
| 5° | 9°  | Geodesy II                             |  |
| 5° | 9°  | Mathematical Cartography               |  |
| 5° | 9°  | Photogrammetry                         |  |
| 5° | 10° | Territorial Information Systems        |  |
| 5° | 10° | Legal Land Surveying II                |  |
| 5° | 10° | Cadastre                               |  |

# Requirements

- English I
- English II
- Professional Practice
- Hygiene and Safety
- Final Work
